

How do I interpret lake-water test results?

When you get your lake water test lab results sent to you, they can be somewhat difficult to understand. We can help. There is a wonderful resource guide available called "Understanding Lake Data" that can help the lay person through the meanings of all those graphs and charts. We have guidebooks available in the office, or if you would prefer to view them online, click on the following link or copy and paste it to your browser:
