

How do we get a lake grant?

Whether you are reacting to an infestation of aquatic invasives, you would like to increase fish habitat in your lake, or do a water quality study, there are state lake grants that fit many different project types. Lake grants are not hard to get, but they are competitive. You need to have a good idea of what goal or goals you have in mind for a project and put work into the application process.

For information about specific lake grant types and for application forms, click on the following link or copy and paste it to your browser:
